

## Starting with an empty WP installation

### A - Plugin installation and connection to the API

Obtain from the apimo support the token and the supplier ID (**4-digit provider ID**) of an API access open specifically for the single site

Install the plugin

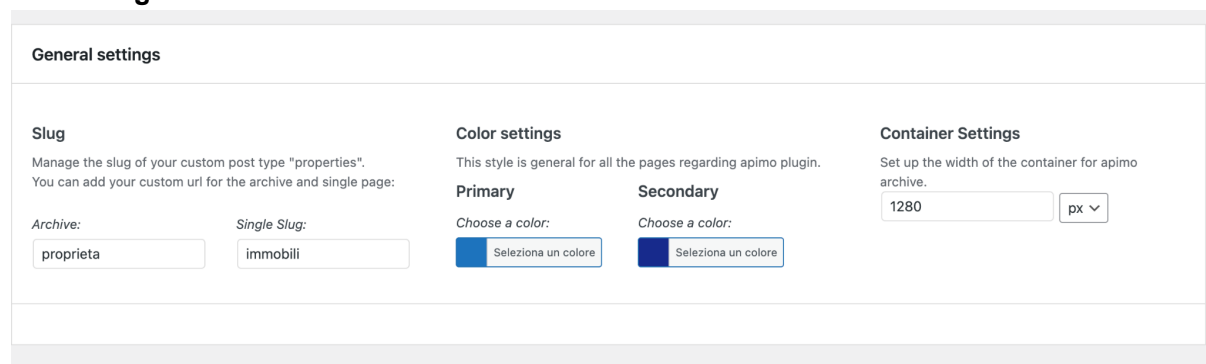

In General Settings> Add your API key: paste the token

Company ID> paste the provider ID

Validate Key; it should show Your keys are valid (check with the support the validity of the tokens if not)

**Clear all data: to be used only if you want to change the agency connected to the site; delete all data imported from apimo!**

### B - Settings

Add the slugs: they must be different for the single property page (single slug) and for the archive. They generate a complete page that can be added to the site.

Choose the Primary and Secondary colors

Primary: labels and titles

Secondary: prices

## Choose the page width in Container setting

### Setting - Archive Properties

**1 Layout**

Choose the card type for the properties in the archive page:

**Landscape**  

**Portrait**  

Scegli il numero di colonne per ogni vista del tuo sito web:

Desktop	Tablet	Mobile
Number of elements: <input type="text" value="3"/>	Number of elements: <input type="text" value="2"/>	Number of elements: <input type="text" value="1"/>

Layout> choose the layout of the properties (do not check Show unavailable services, it is only for debugging)

The number of columns in the property list is: desktop 2 tablet 2 mobile 1 (the site is not optimized for different choices)

**2 Filter and pagination**

Choose the filter to show in your archive page:

**Standard filter**

- ☒ Category Filter
- ☒ Number of rooms
- ☒ Number of bedrooms
- ☒ Price range
- ☒ Areas range
- ☒ Dates
- ☒ Location (Region, City, District)

**Advance filter**

- ☒ Giardino
- ☒ Terrazza
- ☒ Balcone
- ☒ Garage or Box
- ☒ Parking space (internal or external)
- ☒ Cantina
- ☒ Pool
- ☒ Ascensore

Abilita la paginazione e scegli il numero di elementi per pagina:

Enable pagination ☒

Number of post per page

Choose search filters

For Number of posts per page, choose a multiple of 2

In Gallery display type, one of the two options must be compulsorily chosen

Activate the Meta fields and save

### Manually Run

You can manually run the properties import from APIMO webservice.

Run Scheduler

In Apimo> Logs start the Run Scheduler to recover the properties

## C - Personalization

Customize Pages: See Site> Customize> Add Site Main Menu Items

## D - Shortcode

In Apimo> Apimo: generate the shortcode

Generate shortcode

1

2

3

4

5

6

### Select the properties

Scegli gli immobili da mostrare. Ricorda che puoi generare quanti shortcode desideri.

Gli immobili piu belli

Tutti gli immobili

Next

This process will allow you to generate the selection of properties or to extract all properties.

Choose the selection of properties: with this command we can filter properties for rent or sale by choosing the Category filter. To filter properties by category, do not choose the filter in the second step. You must then choose the other filters and follow the wizard until the shortcode is generated.

Properties can be filtered by filters, tags or by manual selection.

In the site> + New> Create a new page, rename it, paste the shortcode,

You can also generate shortcodes that filter by custom\_tag (custom attributes)
