

Custom Post Type Calculator | WordPress Plugin

version 0.3

Create a multi-purpose category-based calculator and use it to calculate item amounts and values. Allow the user to request a quote based on current calculation.

CPT Calculator creates a new post type - items - and it allows you to generate items and costs. Create a new item, add a cost inside the content area and save it. Use the included shortcode to generate a calculation form and a quote request form.

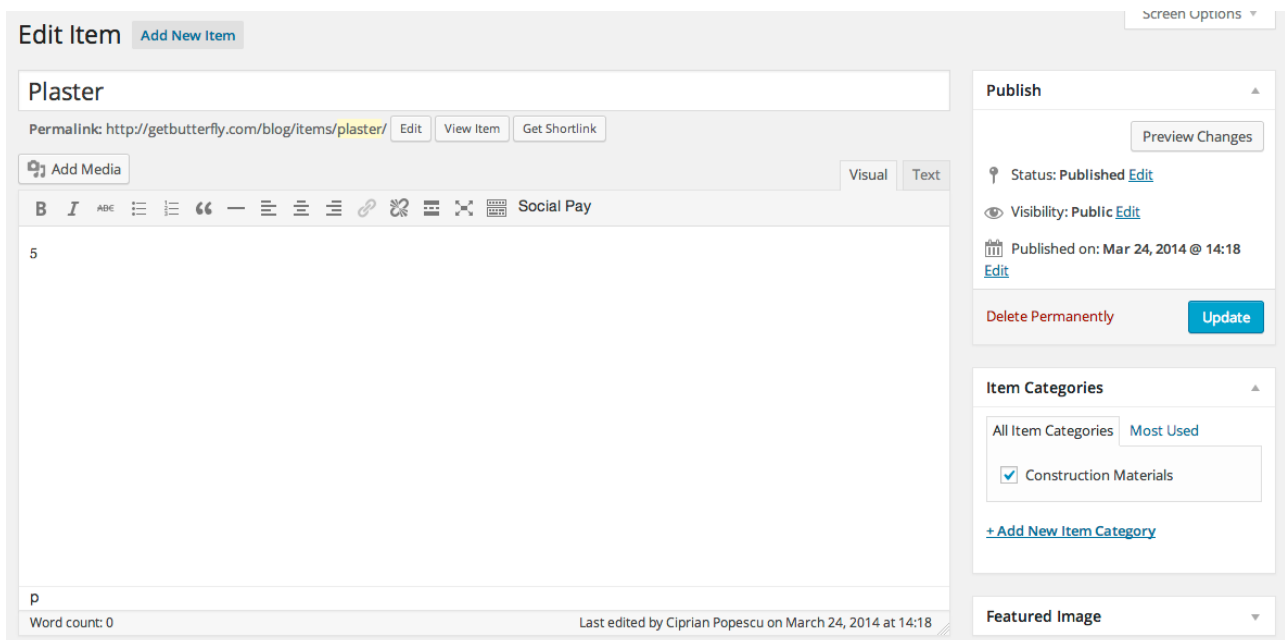

The plugin allows for total customization of forms, string translation for multilanguage WordPress web sites and category-based shortcodes.

Need to **generate a construction materials calculator**? **Add your materials**, such as tiles, hone, parquet, marble, plaster, gypsum and more, **add prices** for each of them and **you are ready!**

Your items will act as custom posts and they use only two fields (the name and the price). Use the post title to add the name of your item and the post content to add the price. Do not add any other content. You're all set!

Items Usage

Create new items and add name and price:

Select desired categories (or add new ones) and publish your item. All items are saved as custom posts:

Submission and Display Settings

Administrator email address

This is the administrator's email address

Surface label

This is the label of the surface fields (e.g. Surface)

Measurement label

This is the label of the measurement type (e.g. sqm, mp)

Calculate button label

This is the label of the main calculate button

Result label

This is the label of the result section

Contact section title

This is the title of the contact section

Contact button label

This is the label of the contact form submission button

Calculation Form Usage

This shortcode displays the calculator:

[cpt-calculator]

This shortcode displays the calculator (category-based):

```
[cpt-calculator category="my-category"]
```

Features

- Works with all themes
- No performance impact

Installation

1. Upload the **cpt-calculator** folder to your '/wp-content/plugins/' directory
2. Activate the plugin via the Plugins menu in WordPress
3. A new **CPT Calculator** menu will appear in WordPress containing items and settings
