

# SS Find Post with Password

---

## Description

This plugin allows you to search out and find posts with a specific password.

The plugin was developed with photographers in mind who may want to password protect their albums and give that password to clients, without having to provide dedicated links and or user-name login details each time.

The plugin provides a simple password field with a submit button. On submitting the form, if a post / page exists with that password then the user will be redirected to that page and automatically logged in. If no post / page is found then an error will be displayed.

This plugin will integrate with most custom post types and Gallery plugins including NextGen Gallery and WP Photo Seller

## Usage

To install the plugin, download it [here](#) and then click on 'Add new plugin' and browse for the zip file. You will need to activate the plugin after installing it.

Once installed and activated, just put the shortcode: `[ss_postpassword]` into any page / post / widget that you would like the search to be placed.

You can use the following variables within the shortcode to customize it to your needs:

`[ss_postpassword submit="Submit"]` – change the button label

`[ss_postpassword error="Your error message here"]` – change the error message

`[ss_postpassword text="Your text here"]` – change the internal text

`[ss_postpassword errortext="Your error text here"]` – this is the internal text on error

`[ss_postpassword uikit="on"]` – turn on UIKit style for error and alert message (requires [UIKit](#))

## F.A.Q

[What if I use the same password for two pages?](#)

The plugin will redirect to the first page with the specified password. It is your responsibility to maintain unique passwords throughout your website.

[Is UIKit recommended?](#)

We love UIKit and recommend it both in general and to help style our plugins. The plugin will work perfectly without this framework, but if you would like to install it we have developed a lightweight plugin to install it into your wordpress installation.
